

Annuities for retirement

Annuities are designed to help you save for retirement and efficiently turn those savings into income when needed. An annuity is a contract or agreement in which you make payments to an insurance company, which in turn agrees to pay you an income stream or a lump sum amount in the future. Annuities offer a range of features that can be selected based on your individual needs and preferences, giving you flexibility in managing your retirement savings.

How can annuities play a role in your retirement portfolio?

Annuities can help you pursue several retirement goals, including generating lifetime income as well as growing and protecting retirement assets. Annuities can be a valuable tool to help you manage certain retirement risks, including:

- **Longevity risk:** The risk of outliving your assets.
- **Sequence of returns risk:** The risk that market losses early in retirement will deplete your portfolio and impact your ability to generate future income.
- **Withdrawal risk:** The risk of spending too quickly in retirement and running out of money.

Generating lifetime income

You can structure annuities to provide you with guaranteed income in retirement for as long as you live. This can add an element of predictability to your portfolio and help you better weather a variety of market conditions over a retirement that may last 30 years or more. Combined with other predictable income streams, like Social Security and pension income, an annuity can help give you the confidence that you will be able to meet your essential day-to-day expenses throughout your retirement.

Annuities can also provide married couples with an income stream that will continue after one spouse has passed away.

Protecting retirement assets

Some annuities also offer protection from market volatility by guaranteeing all or part of your original investment while still participating in market gains.

Tax-deferred savings for retirement

Earnings from investments held in an annuity grow on a tax-deferred basis, meaning you are taxed only when you make withdrawals or receive income. This can help reduce the impact of taxes on your portfolio while you are saving and put more of your money to work.

If you have maximized your contributions to retirement plans such as IRAs or 401(k)s, annuities may provide an additional way to increase tax-deferred savings for retirement.

Because IRAs and other retirement plans already offer tax-deferred savings, you should purchase an annuity in such a plan only if you want other benefits an annuity offers, such as income guarantees or death benefit guarantees.

The guarantees under an annuity contract are backed by the issuing insurance company.

What types of annuities are available?

There are different types of annuities, each offering a different approach to investing along with various liquidity and income options.

Merrill Lynch, Pierce, Fenner & Smith Incorporated (also referred to as "MLPF&S" or "Merrill") makes available certain investment products sponsored, managed, distributed, or provided by companies that are affiliates of Bank of America Corporation ("BoFA Corp."). MLPF&S is a registered broker-dealer, registered investment adviser, Member SIPC and a wholly owned subsidiary of BoFA Corp. Merrill Lynch Life Agency Inc. ("MLLA") is a licensed insurance agency and a wholly owned subsidiary of BoFA Corp.

Investment products offered through MLPF&S, and insurance and annuity products offered through MLLA:

Are Not FDIC Insured	Are Not Bank Guaranteed	May Lose Value
Are Not Deposits	Are Not Insured by Any Federal Government Agency	Are Not a Condition to Any Banking Service or Activity

Fixed rate annuities: Offer a pre-established, guaranteed rate of return for a specified period. They offer a variety of timeframes, so you can select the guarantee period that is right for you and at the end of each period, you can withdraw your savings or elect a new guarantee period at the current rates being offered. A fixed annuity may be appropriate if you are seeking protection of retirement assets through guaranteed returns.

Variable annuities: Enable you to participate in the markets by offering a wide range of professionally managed investment options that can be aligned with your risk tolerance and time horizon. You can also change your investment options to rebalance or change your asset allocation strategy while continuing to defer taxes on any growth within the annuity. Variable annuities can offer you more growth potential than fixed rate annuities, but the value of your annuity is subject to market risk and will fluctuate based on the performance of the investment options chosen.

For an additional cost, you can add optional lifetime income benefits for a guaranteed minimum level of income regardless of how well your annuity performs, even if the value of your annuity falls to zero. The level of income also has the potential to increase over time based on investment performance. You can also elect death benefit options to protect assets for beneficiaries.

A variable annuity may be appropriate if you are seeking (1) lifetime income with potential for the income to grow through professionally managed investment options, (2) death benefit protection for beneficiaries or (3) tax-deferred growth potential.

Indexed annuities: While indexed annuities are not a direct investment in the stock market, they offer investment growth through returns tied to the performance of market indices, such as the S&P 500®, over a variety of time horizons.

- **Fixed indexed annuities** provide 100% principal protection from the insurance company. To offset this protection, gains tied to the annuity are capped, so growth may be less than the actual market gains achieved by the index. Similar to variable annuities, fixed indexed annuities may also offer optional lifetime income benefits for retirement income.

A fixed indexed annuity may be appropriate if you are seeking (1) growth potential with full protection of retirement assets or (2) lifetime income.

- **Variable indexed annuities** provide limited downside protection primarily through the use of “buffers.” Your principal is only at risk on any market losses during an index period that exceed the buffer, which is typically a loss of 10 to 30%. However, your upside growth opportunity is generally higher than the cap rates offered by fixed indexed annuities. A variable indexed annuity may be appropriate if you are seeking growth potential with partial protection of retirement assets.

Income annuities: Offer an income stream for life that will start on a future date chosen by you at purchase. These products are designed for income purposes only. Unlike the other types of annuities described previously, there is no savings component or liquidity with income annuities. Once purchased, you give up access to your principal in exchange for the income stream guaranteed by the insurance company. As a result, income annuities typically offer you the greatest amount of income per dollar invested when compared to other types of annuities. An income annuity may be appropriate if you are seeking maximum income and do not need to access your funds in the future.

Type of annuity	May be appropriate if you are seeking	What are the costs
Fixed annuity	protection of retirement assets through guaranteed returns	Fixed annuities do not have separate fees. The insurance company includes their costs when establishing their interest rates.
Variable annuity	lifetime income with potential for the income to grow through professionally managed investment options, death benefit protection for beneficiaries or tax-deferred growth potential	Variable annuities do have separate fees, which will vary depending on the terms of the contract, investment options and optional features you select.
Fixed indexed annuity	growth potential with full protection of retirement assets or lifetime income	Fixed indexed annuities do not have separate fees unless optional features are elected. The insurance company includes their costs when establishing their cap rates. Additional fees may apply if optional guarantees are selected.
Variable indexed annuity	growth potential with partial protection of retirement assets	The insurance company typically includes their costs when establishing their cap rates. However, some products may have distinct fees which result in higher cap rates.
Income annuity	maximum income and do not need to access your funds in the future	Income annuities do not have separate fees. The insurance company includes their costs when establishing their interest and income rates.

Things to understand before you invest

What are the costs?

Annuities typically have higher fees than other traditional investments because of the additional guarantees and protection they provide. These higher fees affect the annuity's performance over time. Variable annuity fees will vary depending on the investment options and optional features you select. For fixed, indexed and income annuities, you typically will not see specific fees because the insurance company includes their costs when calculating their interest and income rates.

Charges and fees may also apply to early withdrawals from an annuity, which can also affect your investment performance. The exact terms for all charges will vary by product and are explained in the prospectus, if available, or other product documents provided by the insurance company.

What if I need access to my funds?

There may be a surrender charge, or fee for accessing your money early. However, most annuities allow you to withdraw up to 10% of the annuity value without penalty (see potential tax implications below). Some fixed annuities will also make a market value adjustment, which may be either positive or negative and is typically based on the relationship of the market interest rates at the time of withdrawal and the interest rate guaranteed in the annuity. Annuities are long-term investments and you should plan to set aside other funds to help pay unforeseen expenses.

How are annuity earnings taxed?

Annuity earnings accumulate on a tax-deferred basis. Withdrawals of earnings are subject to ordinary income tax rates and a 10% additional federal tax may apply to withdrawals before you reach age 59½. You should consult with a tax advisor before making tax related investment decisions.

Concentration risk

Annuities should be a complement to a broader retirement income generation strategy — not a replacement for it. Merrill generally recommends a diversified portfolio to meet your investment objectives and will recommend the investment of account assets in a diversified manner across multiple asset classes, sectors, or industries in order to reduce the additional investment risk frequently associated with concentrated investments. Having a high percentage of your liquid net worth in annuity contracts may reduce your ability to meet unforeseen financial needs. You should discuss with your advisor how much to invest in an annuity based on your individual situation.

Time horizons

Younger clients should consider the cumulative impact of fees over a long time horizon. Older clients should carefully evaluate the annuity benefit period against their life expectancy, as well as take into account other legacy and wealth transfer goals.

Investment loss

The level of growth potential and market risk varies among the different types of annuities. Variable annuities offer more growth potential, but also have more market risk. Their value will fluctuate based on the performance of the investment options chosen. Fixed annuities offer less growth potential, but they also protect you from market risk and help preserve your retirement savings. Be sure to discuss these trade-offs and your risk tolerance with your financial advisor when considering an annuity for your retirement portfolio.

Other ways to generate retirement income

Multi-asset portfolio with systematic withdrawal rate:

You initially draw down a percentage of a portfolio's assets to provide income. In each subsequent year, the withdrawal amount is increased in line with inflation and the portfolio rebalances the remaining assets to a target allocation. This helps combat inflation risk and provides a steady stream of income. However, your investments are vulnerable to market declines. Unfavorable market conditions may force you to reduce your withdrawal amount.

Bond ladder: The portfolio is invested equally in bonds maturing periodically, usually every year or every other year. As the bonds mature, money is reinvested on the long-end to maintain the maturity structure. It's a structure that can potentially create a steady income stream, while helping to reduce the risks associated with long-term interest rate exposure. A bond ladder can help protect against inflation while providing a steady stream of income, but your investments are subject to market fluctuations and do not have downside protection.

Brokered Certificates of Deposit: These are FDIC-insured interest-bearing deposits issued for a specified length of time by a bank or savings association and purchased through a brokerage account. Your principal is not subject to market risk. They can potentially create a steady income stream, but are subject to interest rate risk and income can vary over time.

Annuities available through Merrill

At Merrill, you can choose how you would like to invest based on your investment style, advice preferences and which type of annuity best fits your needs.

Selecting the appropriate annuity depends on your personal situation, including other sources of retirement income, your expense expectations and priorities, your risk tolerance and time horizon. Your advisor can help you better understand and evaluate your options and choose an annuity that is most appropriate for your situation.

All annuity products offered through your advisor have undergone a strict due diligence process. Moreover, before a product is purchased, you can be confident that it has undergone an additional screening to ensure it is in your best interest given your needs and personal situation.

Talk to a Merrill Lynch Wealth Management Advisor today

Whether you are still saving for retirement or shifting your focus from building wealth to generating retirement income, it's important to think about how much your chosen retirement lifestyle will cost and ultimately how you will fund that lifestyle.

At Merrill, we believe it all starts with a disciplined retirement income plan built around your goals and life priorities. To learn more about how we can help you pursue your retirement goals, contact your Merrill Lynch Wealth Management Advisor or visit ml.com to find an advisor near you.

Merrill, its affiliates, and financial advisors do not provide legal, tax, or accounting advice. You should consult your legal and/or tax advisors before making any financial decisions.

This material does not take into account a client's particular investment objectives, financial situations or needs and is not intended as a recommendation, offer or solicitation for the purchase or sale of any security or investment strategy.

Merrill offers a broad range of brokerage, investment advisory (including financial planning) and other services. There are important differences between brokerage and investment advisory services, including the type of advice and assistance provided, the fees charged, and the rights and obligations of the parties. It is important to understand the differences, particularly when determining which service or services to select. For more information about these services and their differences, speak with your Merrill Lynch Wealth Management Advisor.

All annuity contract and rider guarantees, including optional benefits and any fixed subaccount crediting rates or annuity payout rates are backed by the claims-paying ability of the issuing insurance company. They are not backed by Merrill or its affiliates, nor does Merrill or its affiliates make any representations or guarantees regarding the claims-paying ability of the issuing insurance company.

Annuities are long-term investments designed to help meet retirement needs. They are a contractual agreement where a client makes payments to an insurance company, which, in turn, agrees to pay out an income stream or a lump sum amount at a later date. Annuities typically offer (1) tax-deferred treatment of earnings; (2) a death benefit; and (3) annuity payout options that can provide guaranteed income for life. There are contract limitations, fees and charges associated with annuities which include, but are not limited to mortality and expense risk charges, sales and surrender charges, administrative fees, charges for any optional benefits, and charges for the underlying investment options in variable annuities. In addition, variable annuity contract values will fluctuate and are subject to market risk including the possible loss of principal. It is possible to lose money in a variable annuity purchased with an optional protection rider. Variable annuities have holding periods, limitations, withdrawal charges, exclusions, termination provisions, and terms for keeping them in force. Optional riders may be irrevocable and expire without use. Early withdrawals may be subject to surrender charges, and taxed as ordinary income, and in addition, if taken prior to age 59½ an additional 10% federal tax may apply. Withdrawals reduce annuity contract benefit, values and optional guarantees in an amount that may be more than the actual withdrawal. Past performance should not be a representation of future performance.

For non-qualified and stand-alone qualified annuity contracts, annuitization must occur by the annuitant's age 95. At that date, any guaranteed minimum death benefit no longer will apply. Clients should contact the issuing insurance company prior to the maturity date to discuss options, including changing the annuitant, if permitted by the annuity contract. For custodially held qualified contracts, as a distributor Merrill will not require annuitization at age 95.

An indexed annuity offers allocation options called index-linked strategies. Index-linked strategies offer clients some level of downside protection combined with upside potential linked to the price return (excludes dividends) of an index, such as the S&P 500®. The level of downside protection differs between fixed indexed and variable indexed annuities. The upside potential is typically capped for each index period and these cap rates are declared in advance by the insurance company. Generally, fixed indexed annuities will offer clients more downside protection and less upside potential than variable indexed annuities. Indexed annuities are not a direct investment in the stock market.

It is important to note that indexed annuity contracts commonly allow the insurance company to change the participation rate, cap rate, and/or spread rate on a periodic — such as annual — basis. Such changes could adversely affect your return. No single index crediting method will provide the highest interest credit in all market scenarios. The guaranteed minimum cap rate/maximum spread rate are established when the annuity is purchased and disclosed in the annuity contract. Read your contract carefully to determine what changes the insurance company may make to these features.
